

External Awning Blind

Keylite's External Awning Blind is a simple but effective solution to reduce excessive heat gain caused by direct sunlight from the glass.

Features

- ▶ **Heat Reduction** - The Keylite External Awning Blind is attached to the roof window and reflects direct sunshine to ensure that on warm, sunny days, the warmth penetrating into the living space is reduced by up to 70%. During the summer months, this process results in a pleasant room temperature for the occupants.
- ▶ **Enhanced Privacy** - The fabric of the Keylite External Awning Blind offers the occupants of the building added peace of mind. With its 10% openness factor it is practically impossible to view through from a distance.
- ▶ **Integrated Design** - The Keylite External Awning Blind can be installed seamlessly alongside the Keylite Roof Window from inside the roof within a matter of minutes.
- ▶ **Durability** - Made from water resistant material, the Keylite External Awning Blind has been rigorously tested and is capable of withstanding even the most volatile of rain storms.
- ▶ **Noise Reduction** - When the roof window is in the open position the acoustic impact of rain or hail is significantly reduced as the Keylite External Awning Blind now provides the immediate point of contact. The external façade of the External Awning Blind allows the sound to be absorbed and reflected therefore reducing the amount penetrating to the area below.

Application

- ▶ Keylite External Awning Blinds can be applied to Centre Pivot and Top Hung/ Fire Escape windows individually or in combinations.

Operation

- ▶ Keylite External Awning Blinds will be supplied manually as standard. When installed on the Roof Window the Awning Blinds will operate in the same manner as the Roof Window does. If it is an Electrically Operated Roof Window the blind will move along with the sash.

Guarantee

- ▶ 3 Years – Keylite's hassle free guarantee on blinds, Roller Shutters, accessories and electrics.

Finish Options

- ▶ Exterior - Charcoal Black
