

# Roller Shutters

Keylite External Roller Shutters offer maximum heat protection and enhanced noise reduction. With a range of operations available, they can be applied to almost the entire Keylite range.

## Features

- ▶ **Heat Protection** - The Keylite External Roller Shutter is attached to the roof window and reflects the direct sunshine to ensure that on warm, sunny days, the warmth penetrating into the living space is reduced by up to 96%. During the summer months, this process results in a pleasant room temperature for the occupants.
- ▶ **Heat Retention** - Equally Keylite Roller Shutters also prevent the loss of energy. When in the fully closed position they will keep the room warm in the winter resulting in any heat already within the room remaining there.
- ▶ **Noise Reduction** - The acoustic impact of rain or hail is significantly reduced as the roller shutter now provides the immediate point of contact. The external façade of the roller shutter allows the sound to be absorbed and reflected therefore reducing the amount penetrating to the area below.
- ▶ **Additional Security** - The extremely durable Roller Shutter has been designed in such a way that it is virtually impossible to operate externally, thus reducing the chance of someone entering the property via the Roof Window.
- ▶ **Blackout Capabilities** - The Roller Shutter enables you to completely block out all light from entering the property at any time of the day. They are considered ideal for use in bedrooms to aid a great night's sleep.
- ▶ **Integrated Design** - The Keylite Roller Shutter can be installed seamlessly alongside the Keylite Roof Window regardless of the roofing material being used.
- ▶ **Optional Operation** - Much like our Roof Windows, Keylite Roller Shutters can be operated electrically or via Solar power to cater for all your requirements.

## Application

- ▶ Keylite Roller Shutters can be applied to Centre Pivot and Top Hung/Fire Escape windows individually.
- ▶ For Information regarding installations on window combinations, please contact the Keylite Technical Team.

## Operation

- ▶ The Keylite Roller Shutter can be electronically operated via a remote control.
- ▶ Keylite's Roller Shutters can be powered electronically through a connection to the building's mains power supply or via solar power, where the sun will charge the built in Solar Panel.

## Guarantee

- ▶ 3 Years – Keylite's hassle free guarantee on blinds, Roller Shutters, accessories and electrics.

## Finish Options

- ▶ Exterior - Grey
